A.5.3 Methods of Collecting Vehicle Classification Data

Manual vehicle classification methods, based on either vehicle body type (e.g. surveys by the Australian Bureau of Statistics) or axle configurations (e.g. Austroads), have been used for many years. Manual methods are now largely confined to intersection turning movement counts. As these surveys require considerable human resources, they are costly and generally limited to short period counts – generally up to 12 hours duration.

The reasons for this decision are as follows:

- Access to the proposed extractive site is via an existing haul route via Mareeba-Dimbulah Road, refer to RPS Proposal Plan DWG 9369-23.
- A review of the road access by the department indicates that the access has been upgraded to include a Basic right turn treatment (BAR) and a Rural basic left turn treatment (BAL).
- The department is of the opinion that the design of the access is sufficient to maintain the safety and efficiency of the state-controlled road.

Please refer to **Attachment A** for the findings on material questions of fact and the evidence or other material on which those findings were based.
