BACKGROUND

In August 2023 Northern Ecology conducted an Ecological Assessment at 8 Victor Place, Kuranda to provide supporting documentation for a proposed development of a residential dwelling.

The ecological assessment was aimed at identifying the ecological values present at the site to enable accurate assessment of relevant statutory and non-statutory matters that may be impacted by the development.

The proposed footprint is mapped as containing one Matter of Local Environmental Significance (MLES) under the *Mareeba Shire Council (MSC) Planning Scheme 2016* – Environmental Significance Overlays, MSES Wildlife Habitat. As such, assessment was completed in accordance with the MSC Policy 2 - Ecological Assessment Reports to accurately address the potential impacts on Wildlife Habitat against the performance outcomes described in the Environmental Significance Overlay Code (S8.2.4) under the *MSC Planning Scheme 2016*.

This document details the assessment against the relevant Environmental Significance Overlays associated with the development and should be read in conjunction with the Ecological Assessment Report (Northern Ecology, 2023).

ENVIRONMENTAL SIGNIFICANCE OVERLAY CODE – WILDLIFE HABITAT

Wildlife habitat mapping covers the mapped remnant vegetation within the study area and is mapped across the entire Project footprint (refer Northern Ecology 2023).

The remnant vegetation within the Project footprint contains suitable habitat for protected wildlife. During the field survey, it was identified that the area contains potential foraging resources and habitat suitable for native species (refer Northern Ecology, 2023).

Approximately 900 m² is proposed to be cleared for the Project which comprises a disturbed remnant vine forest community and non-remnant areas associated with the existing carport. There were no unique habitat features within the Project footprint that are not available in the surrounding landscape. Furthermore, given the contiguous habitat in the surrounding landscape no fragmentation, or habitat isolation will occur as a result of works.

Nevertheless, the survey confirmed that native fauna species are likely to utilise the vegetation here and it is recommended that a pre-construction habitat survey be conducted to identify if there are any animal breeding places prior to clearing, and a suitably qualified spotter-catcher shall be present during clearing activities. Where a breeding place is identified prior to clearing, a Species Management Program (SMP) will be required prior to undertaking any works. This is considered sufficient to mitigate any potential impacts on native fauna.

An assessment has been conducted against the MSES wildlife habitat criteria in S.8.2.4 - Environmental Significance Overlay Code of the *MSC Planning Scheme 2016*, shown in Table 1 below.

Table 1: Assessment criteria for development within MSES wildlife habitat

Performance outcome	Acceptable outcomes	Applicability to site
<p>PO5 Development within a 'Wildlife habitat' area identified on the Environmental Significance Overlay Maps (OM-004a-o):</p> <p>(a) protects and enhances the habitat of Endangered, Vulnerable and Near Threatened (EVNT) species and local species of significance;</p> <p>(b) incorporates siting and design measures to protect and retain identified ecological values and underlying ecosystem processes within or adjacent to the development site;</p> <p>(c) maintains or enhances wildlife interconnectivity at a local and regional scale; and</p> <p>(d) mitigates the impact of other forms of potential disturbance (such as presence of vehicles, pedestrian use, increased exposure to domestic animals, noise, and lighting impacts) to protect critical life stage ecological processes (such as feeding, breeding or roosting).</p>	<p>A05 No acceptable outcome is provided</p>	<p>No Critically Endangered, Endangered, Vulnerable or Near Threatened fauna species were recorded within the Project footprint. However, it is possible they may utilise the resources and habitat within the site, though for many species this is likely to be in a transitory manner.</p> <p>There are no unique ecological values within the Project footprint that are not present in larger extent in the surrounding landscape and there are no specific connectivity values given the Project footprint is part of a large, contiguous habitat areas.</p> <p>Mitigation measures to minimise potential impacts include, avoiding clearing between October-November to avoid potential impacts to the flute nosed bat (<i>Murina florium</i>), where practicable completing works within the dry season months (May-August) to minimise impacts to migratory birds, completing pre-construction habitat assessment (where an animal breeding place is identified an SMP will be prepared prior to works commencing), having a spotter-catcher present during clearing activities (if during works an animal breeding place is identified, works will cease until an SMP is received), demarcating the clearing area to avoid inadvertent clearing and restricting construction hours between 7am-5pm to reduce the impacts of noise on wildlife.</p> <p>Project can comply with PO5.</p>

Results from the assessment demonstrate the performance outcome relating to the MSES wildlife habitat can be achieved where appropriate mitigation measures are implemented (refer Northern Ecology, 2023).
